# 2025 Worldwide Greenhouse Gas (GHG) Emissions

(per capita; by region; growth)

How to read this diagram: The width of each bar corresponds to the region's population size, the height of the bar shows the emissions per capita, the area of each rectangle therefore represents the total emissions for that region. The area's color represents the growth of total emissions.

Included sectors: power, industrial, buildings, transport, fuel exploration, agriculture, waste.
Not included: Land use, deforestation, organic soil, other and fires (LULUCF).

Based on "GHG Emissions of all World Countries", JRC/IEA 2026 Report, Luxembourg 2026. Data from the JRC EDGAR GHG community database: https://edgar.jrc.ec.europa.eu/report_2026
